

Food Packaging Concepts, plastic packaging for the food industry

Our expertise in packaging for the food industry represents the basis for the extensive offering that ANL Plastics can currently provide in this sector.

Food Packaging Concepts is the department within ANL Plastics that specialises in the development of innovative plastic packaging to meet the demands of consumers as well as the requirements of food manufacturers and retailers.

ANL Plastics, are close to the customer, all over Europe

3 manufacturing facilities in Europe:

This allows us not only to supply all over Europe in a fast and logistically efficient manner, but we can also offer our customers guaranteed manufacturing capacity. Each production mould can actually be used in every one of the 3 locations. ANL plastics continually invests in new, innovative concepts and state-of-the-art technology and machines.

The development of packaging is done according to 6 criteria:

- ✓ **Automisation:**
every aspect of your manufacturing process is taken into account, so that the conversion to a new packaging can happen seamlessly.
- ✓ **Re-Sealability:**
your products are optimally protected against drying out and oxidation, even while they are being consumed.
- ✓ **Shelf Life:**
optimal shelf life for your food products is very important and this must be achieved without compromising quality or affecting the taste in any way.
- ✓ **Transparency:**
a crystal clear packaging really displays for all to see the quality and freshness of your products and persuades the consumers to buy.
- ✓ **Environment:**
very little use of resources and optimal use of recycled material contribute towards eco perception on the part of the client.
- ✓ **Design:**
the design of the packaging speaks to your branding and a recognisable design.

Innovation Days

During this periodic event we join our clients in a pro-active discussion about the issues faced by the food sector and how your future packaging can adapt to new demands.

Developing & manufacturing at ANL Plastics

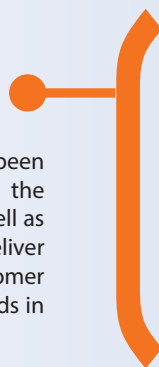

Packagings are developed and manufactured entirely in-house at ANL Plastics, taking into account the wishes and needs of the consumers as well as the manufacturers/retailers:

- Thanks to ongoing monitoring of the market, our packaging specialists are fully aware of all the latest trends in the industry. They are therefore constantly in a position to take advantage of trends and new developments.
- Your packaging provides the perfect balance between product protection and product image.
- Also from a technical perspective, we ensure that the packaging integrates perfectly into the manufacturing process.
- The entire development and manufacturing process takes place in house at ANL Plastics, and is carried out by our own employees:
 - design of the packaging concept
 - design and manufacturing of the synthetic matrix
 - extrusion of the packaging film
 - thermoforming of your packaging

Partnering with ANL Plastics, the obvious choice

For more than half a century now, ANL Plastics has been developing and producing plastic containers that meet the increasing expectations and demands of consumers as well as manufacturers. Our customized solutions enable you to deliver your final product in perfect condition to your end customer or consumer in a package that meets the highest standards in terms of product protection, design, quality, durability.

- ✓ Co-creation: we develop your packaging in partnership with you, from A tot Z, and in-house
- ✓ Our R&D department closely follows the latest trends in packaging and technology
- ✓ A 'dedicated team' of our employees is at your disposal, also after the development and manufacturing of your product packaging
